

Anatomy Questions

- Which of the following does not rotate the femur?
 - piriformis
 - obturator externus
 - gemellus superior
 - quadratus femoris
 - teres major
- One of the origins of the pectoralis major originates on the anterior surface of the medial half of the clavicle
 True False
- The action of the soleus is
 - dorsi flexion of the foot at the ankle
 - everts the foot at the ankle
 - plantar flexion of the foot at the ankle
 - gives medial ankle stabilization
- Which of the following muscle(s) flexes the thigh at the hip?
 - latissimus dorsi
 - psoas major
 - popliteus
 - iliacus
- The middle deltoid
 - abducts the humerus at the shoulder
 - abducts and laterally rotates the humerus at the shoulder
 - depresses clavicle, pulls it inferiorly and anteriorly
 - elevates and rotates scapula upward
- The brachialis originates on the radius
 True False
- Which of the muscles is not one of the Rotator Cuff Muscles?
 - teres minor
 - teres major
 - subscapularis
 - infraspinatus
- The femur articulates with which of the following structures?
 - glenoid fossa
 - calcaneus
 - acetabulum
 - ischial tuberosity
- The sternocleidomastoid acting unilaterally rotates the head
 True False
- The gracilis inserts on
 - the anterior and medial surface of the shaft of the tibia
 - middle third of medial lip of linea aspera
 - on a line extending from lesser trochanter to upper part of linea aspera
 - lateral portion of radius
